Q1. How many different candy types are in this dataset?

```
nrow(candy)
```

```
[1] 85
```

Q2. How many fruity candy types are in the dataset?

```
sum(candy$fruity)
```

```
[1] 38
```

Q.3 What is your favorite candy in the dataset and what is it's winpercent value?

```
candy["100 Grand", ]$winpercent
```

```
[1] 66.97173
```

Q4. What is the winpercent value for "Kit Kat"?

```
candy["Kit Kat", ]$winpercent
```

```
[1] 76.7686
```

Q5. What is the winpercent value for "Tootsie Roll Snack Bars"?

```
candy["Tootsie Roll Snack Bars", ]$winpercent
```

```
[1] 49.6535
```

```
library("skimr")
skim(candy)
```

Table 1: Data summary

Name	candy
Number of rows	85
Number of columns	12
_____	
Column type frequency:	
numeric	12
_____	
Group variables	None

Variable type: numeric

skim_variable	n_missing	complete_rate	mean	sd	p0	p25	p50	p75	p100	hist
chocolate	0	1	0.44	0.50	0.00	0.00	0.00	1.00	1.00	
fruity	0	1	0.45	0.50	0.00	0.00	0.00	1.00	1.00	

skim_variable	n_missing	complete_rate	mean	sd	p0	p25	p50	p75	p100	hist
caramel	0	1	0.16	0.37	0.00	0.00	0.00	0.00	1.00	
peanutyalmondy	0	1	0.16	0.37	0.00	0.00	0.00	0.00	1.00	
nougat	0	1	0.08	0.28	0.00	0.00	0.00	0.00	1.00	
crispedricewafer	0	1	0.08	0.28	0.00	0.00	0.00	0.00	1.00	
hard	0	1	0.18	0.38	0.00	0.00	0.00	0.00	1.00	
bar	0	1	0.25	0.43	0.00	0.00	0.00	0.00	1.00	
pluribus	0	1	0.52	0.50	0.00	0.00	1.00	1.00	1.00	
sugarpercent	0	1	0.48	0.28	0.01	0.22	0.47	0.73	0.99	
pricepercent	0	1	0.47	0.29	0.01	0.26	0.47	0.65	0.98	
winpercent	0	1	50.32	14.71	22.45	39.14	47.83	59.86	84.18	

Q6. Is there any variable/column that looks to be on a different scale to the majority of the other columns in the dataset?

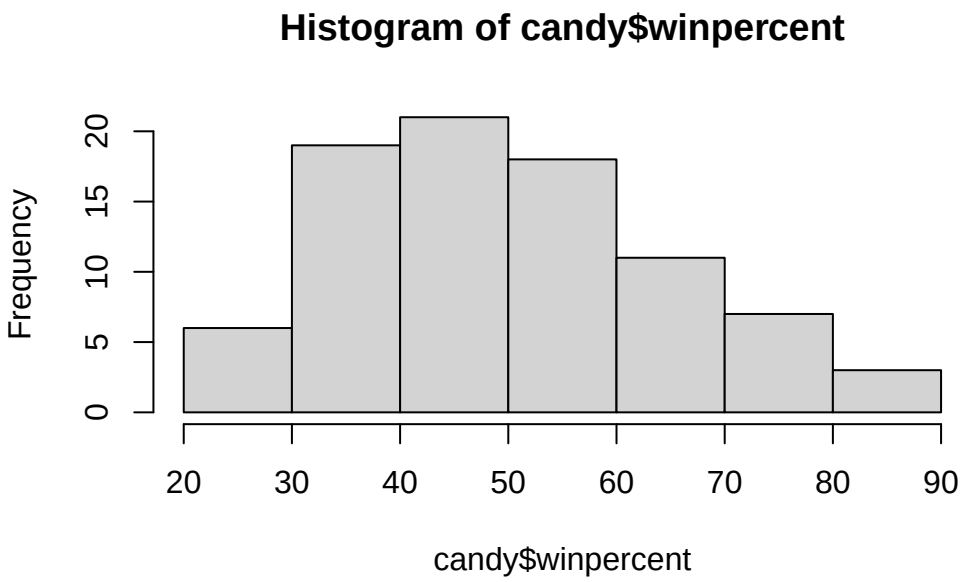
The winpercent is not within a 0-1 scale.

Q7.What do you think a zero and one represent for the candy$chocolate column?

A 1 represents that the candy is chocolate, and a 0 represents that there is no chocholate in the candy.

Q8. Plot a histogram of winpercent values

```
hist(candy$winpercent)
```

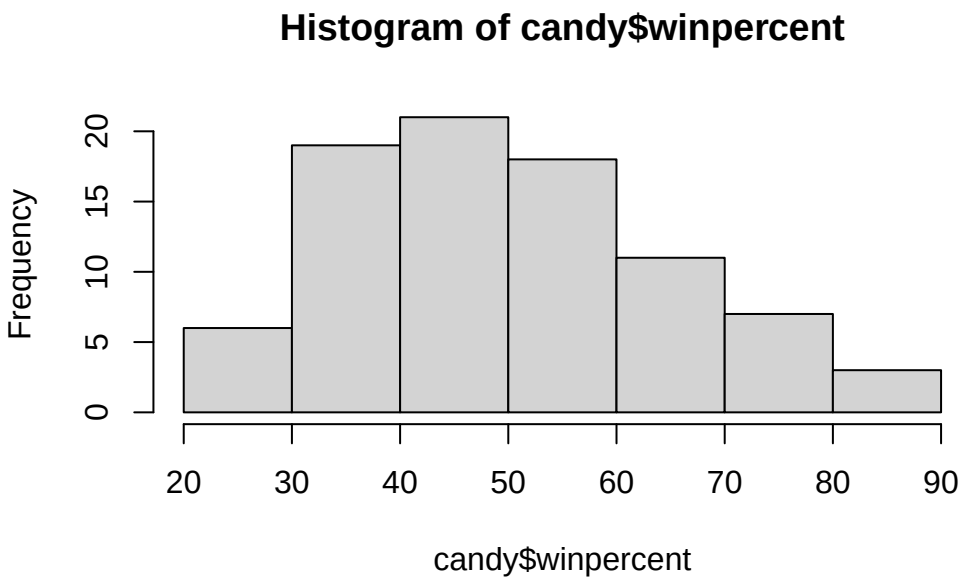


Q9. Is the distribution of winpercent values symmetrical?

The graph is slightly skewed.

Q10. Is the center of the distribution above or below 50%?

```
hist(candy$winpercent)
```



Below

Q.11 On average is chocolate candy higher or lower ranked than fruit candy?

```
choco.inds <- as.logical(candy$chocolate)
choco.win <- candy[choco.inds,"winpercent"]
mean(choco.win)
```

```
[1] 60.92153
```

```
fruity.inds <- as.logical(candy$fruity)
fruity.win <- candy[fruity.inds, "winpercent"]
mean(fruity.win)
```

```
[1] 44.11974
```

On average, chocolate is ranked higher.

Q12. Is this difference statistically significant?

```
t.test(choco.win, fruity.win)
```

```
    Welch Two Sample t-test

data:  choco.win and fruity.win
t = 6.2582, df = 68.882, p-value = 2.871e-08
alternative hypothesis: true difference in means is not equal to 0
95 percent confidence interval:
 11.44563 22.15795
sample estimates:
mean of x mean of y
 60.92153  44.11974
```

Because the P-value is so small, it's significant.

Q13. What are the five least liked candy types in this set?

```
head(candy[order(candy$winpercent),], n=5)
```

```

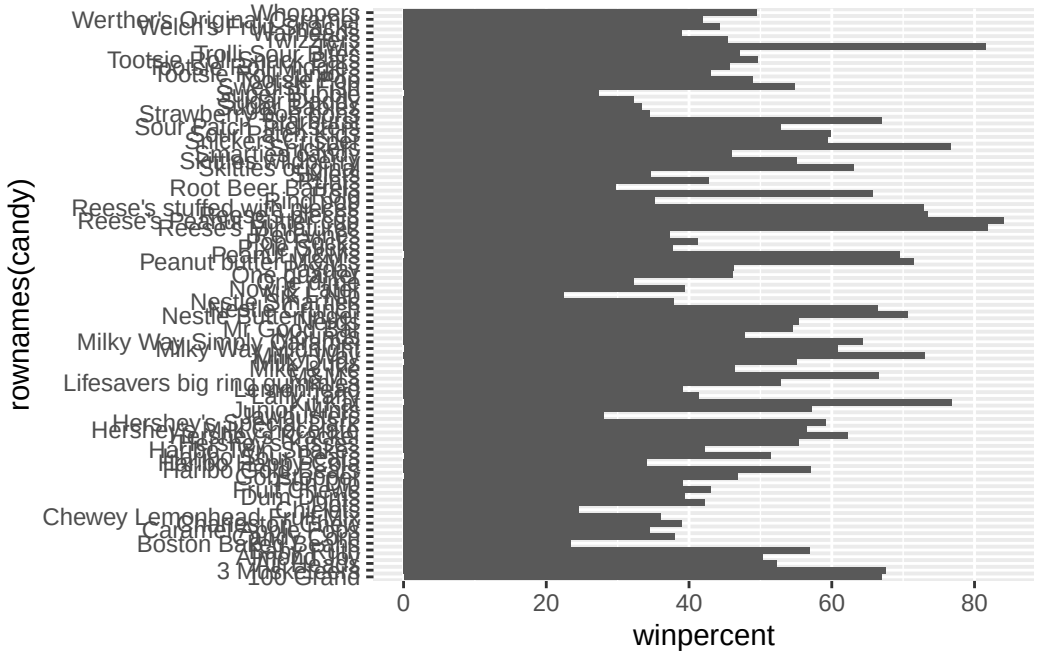
Snickers                         0.651   76.67378
```

Q15. Make a first barplot of candy ranking based on winpercent values.

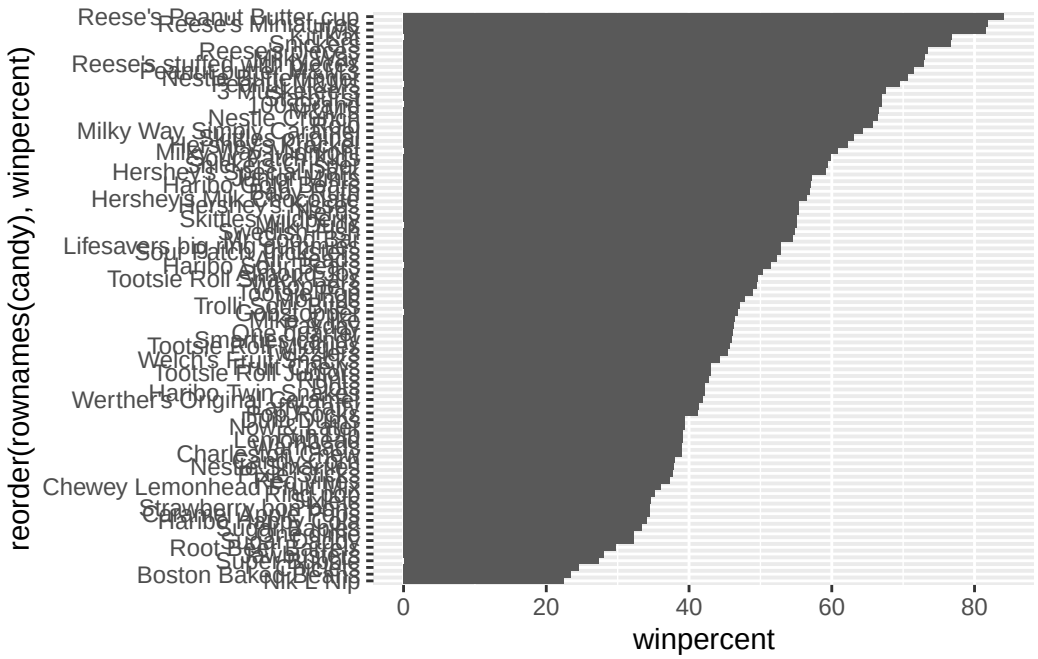
```
library(ggplot2)

ggplot(candy) +
  aes(winpercent, rownames(candy)) +
  geom_col()
```



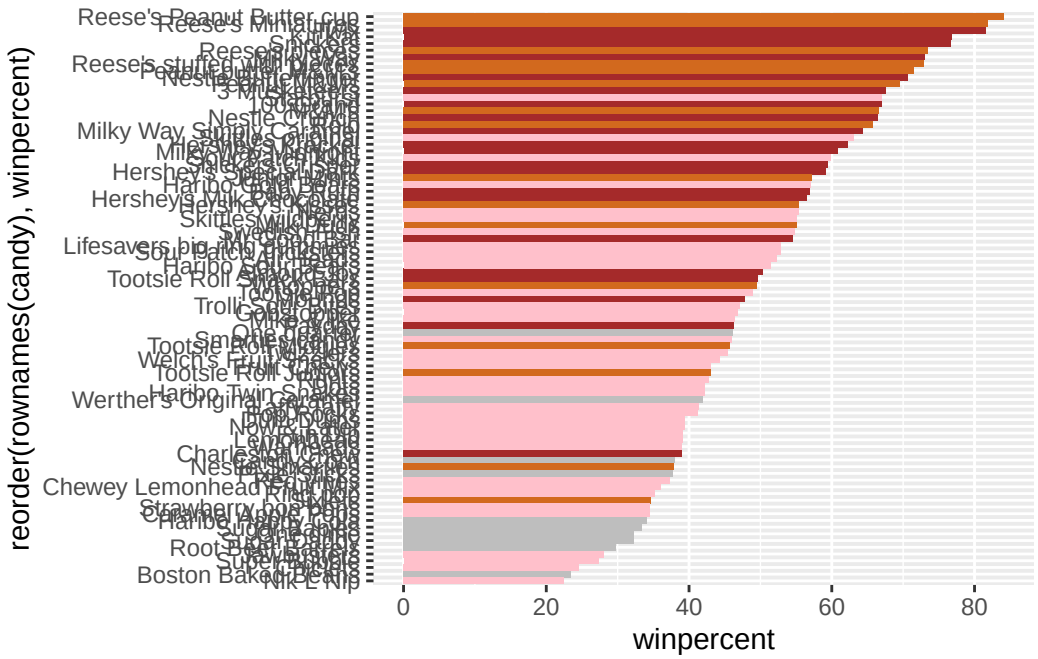
Q16. This is quite ugly, use the reorder() function to get the bars sorted by winpercent?

```
ggplot(candy) +
 aes(winpercent, reorder(rownames(candy),winpercent)) +
  geom_col()
```



```
mycols <- rep("gray", nrow(candy))
mycols[ as.logical(candy$chocolate) ] <- "chocolate"
mycols[ as.logical(candy$fruity) ] <- "pink"
mycols[ as.logical(candy$bar)] <- "brown"
```

```
ggplot(candy) +
  aes(winpercent, reorder(rownames(candy),winpercent)) +
  geom_col(fill=mycols)
```



Q17. What is the worst ranked chocolate candy?

Sixlets

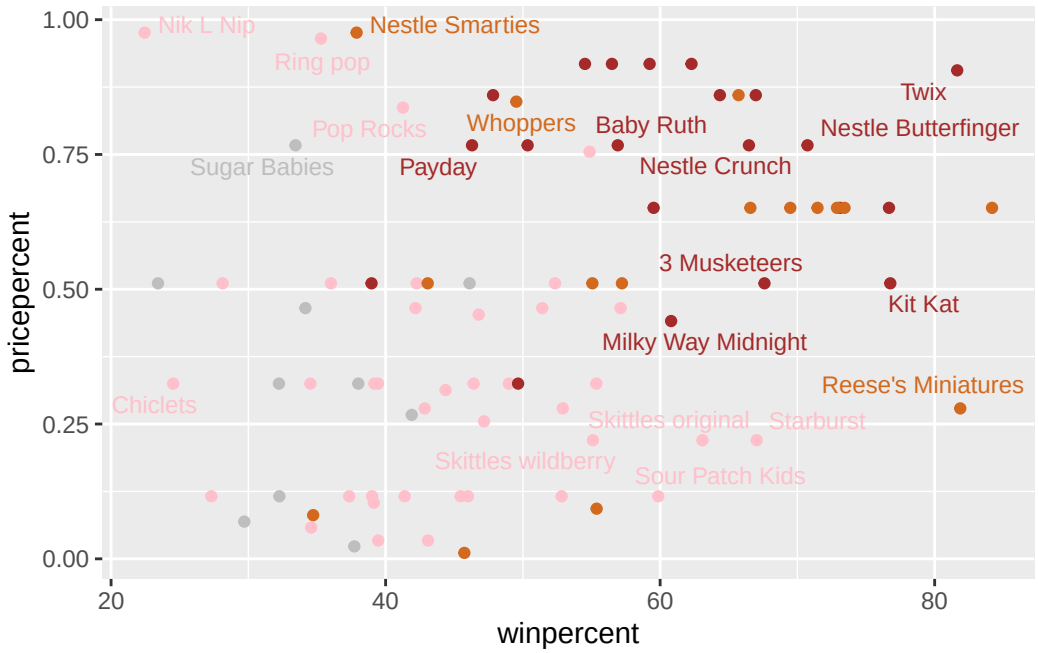
Q18. What is the best ranked fruity candy?

Starburst

```
library(ggrepel)

# How about a plot of price vs win
ggplot(candy) +
  aes(winpercent, pricepercent, label=rownames(candy)) +
  geom_point(col=mycols) +
  geom_text_repel(col=mycols, size=3.3, max.overlaps = 5)
```

```
Warning: ggrepel: 65 unlabeled data points (too many overlaps). Consider
increasing max.overlaps
```



Q19. Which candy type is the highest ranked in terms of winpercent for the least money - i.e. offers the most bang for your buck?

Reese's miniatures

Q20. What are the top 5 most expensive candy types in the dataset and of these which is the least popular?

```
ord <- order(candy$pricepercent, decreasing = TRUE)
head( candy[ord,c(11,12)], n=5 )
```

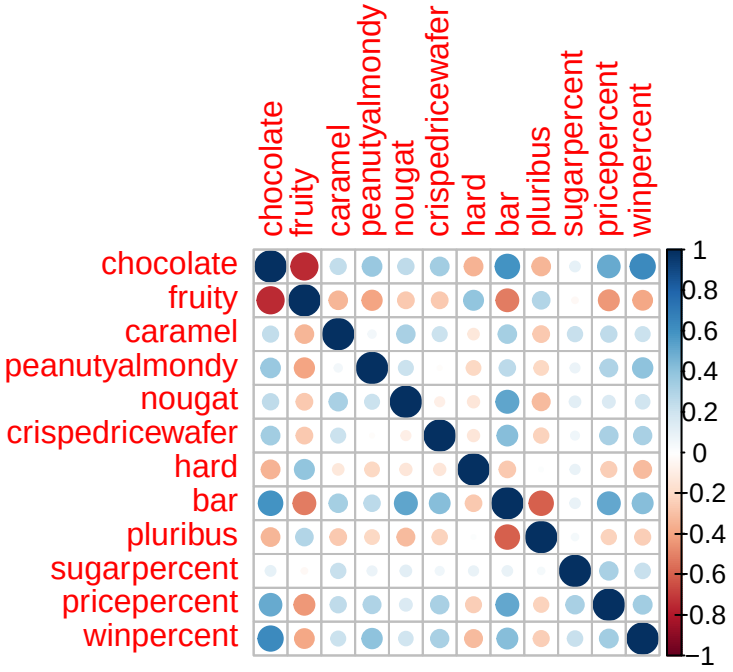
```
                           pricepercent winpercent
Nik L Nip                         0.976   22.44534
Nestle Smarties                   0.976   37.88719
Ring pop                          0.965   35.29076
Hershey's Krackel                 0.918   62.28448
Hershey's Milk Chocolate          0.918   56.49050
```

Nik L Nip

```
library(corrplot)
```

```
corrplot 0.92 loaded
```

```
cij <- cor(candy)
corrplot(cij)
```



Q22.Examining this plot what two variables are anti-correlated (i.e. have minus values)?

chocolate and fruity

Q23. Similarly, what two variables are most positively correlated?

chocolate and winpercent/bar (other than chocolate-chocolate, fruity-fruity, ...).

```
pca <- prcomp(candy, scale=TRUE)
summary(pca)
```

```
Importance of components:

Q24. What original variables are picked up strongly by PC1 in the positive direction? Do these make sense to you?

Fruity candies are strongly positive (which makes sense when considering fruity candies like skittles, nerds, …).
